Supporting the Health of Young People in Cornwall Primary Schools

A summary report of the Health Related Behaviour Survey 2019

These results are the compilation of data collected from a sample of primary pupils, aged 8 to 11, in Cornwall during the summer term 2019.

This work was commissioned and coordinated by Cornwall Council Public Health through the Cornwall Healthy Schools Team as a way of collecting robust information via the Health Related Behaviour Survey.

Teachers were briefed on how to collect the most reliable data and then pupils anonymously completed the questionnaire.

2876 pupils in Years 4 and 6 took part in 63 Primary schools. The data will be used to inform planning and support by the schools, the Healthy Schools Programme, Public Health and other services.

A separate secondary school survey was conducted at the same time for which a report is also available.

COMPARISONS
Cornwall data have been compared with the SHEU wider database. A selection of some of the statistically significant differences, where the level seen in the Cornwall data is either 5% above or below that in the wider SHEU database, are included on page 5.

The survey was also carried out in 2017, comparative figures are shown throughout this report in brackets ( ).

2876 young people aged 8 to 11 were involved in the survey

This work was commissioned and co-ordinated by Cornwall Council Public Health and partners. We are grateful to the teachers, schools, and young people for their time and contributions to this survey. As a result of their work we have excellent data to be used by schools, as well as both statutory and voluntary agencies that support the health of young people in Cornwall. This work will inform action plans for joint working between and within organisations involved in improving the health and wellbeing of pupils in schools. The data will be included in the Joint Strategic Needs Assessment (JSNA) and will also support the County Health and Wellbeing strategy, the Cornwall Healthy School programme, the Young People’s Substance Misuse plan and the Teenage Pregnancy strategy.

It will also act as a resource to help schools establish appropriate curriculum development opportunities particularly in PSHE and provide data to support aspects of school self-evaluation in preparation for an Ofsted Inspection.

It is hoped that this report will provide valuable information for these agencies and services who work to improve outcomes for children and young people in Cornwall.
